- Provide tools to quickly and securely share information
- Use as a standalone product or integrated with the UC for Enterprise Empowered User
- Enjoy high definition video, screen sharing, and more
- Choose the best model for your business needs, cloud or on premise

Overview

In today's business environment, knowledge workers must be equipped with easy-to-use tools that help them improve efficiency and lower spending. Because costs associated with business travel are high, giving your employees the ability to conduct online multimedia presentations and meetings offers one of the simplest ways to reduce the need for travel while still enabling individuals from geographically diverse locations to connect. Whether it is facilitating meetings in the boardroom, providing distance learning to students, sharing lab results in a healthcare

environment or enabling IT troubleshooting, people have the need to share ideas and information.

NEC's UC for Enterprise (UCE) Collaboration is a secure, hosted or on premise solution for medium- to enterprise-sized organizations that encourages collaboration and lowers travel expenses by providing your employees and the people they meet with the means to work together securely.

Solution

Improve Teamwork while Lowering Costs

UCE Collaboration enables geographically dispersed employees and mobile workers to easily interact and operate as an integrated team. This cost-effective solution offers conferencing within your network, which eliminates monthly subscription fees to expensive third party conference bridge providers. Additionally, because it requires no additional software installation on the desktop and is compatible with most major browsers and platforms (PC, Mac, and Linux®), its support costs are minimal.

Enable Staff to Better Satisfy Customer Demands

Because this solution is browser-based, there is no software to load on the user's computer. Users can easily collaborate with other staff and customers through its simple to use interface with intuitive icons.

UCE Collaboration provides you with the flexibility to conduct both company-wide employee meetings and one-on-one customer support sessions in real time. Up to 16 video windows are visible per conference, and the conference host can dynamically select who is viewed in the windows – so users are not limited to only 16 video participants. Additionally, options exist to see only the presenter while he or she shares material for a true classroom experience to an extended audience.

Provide Tools to Quickly and Securely Share Information

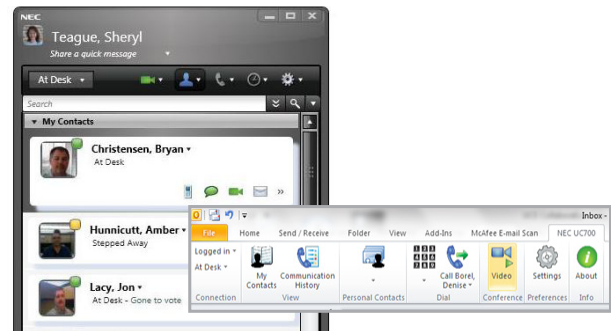

UCE Collaboration provides tools that enable you to work with partners, suppliers and customers to shorten decision cycles, improve information sharing and increase the speed of your business. This 100% browser-based solution is compatible with standard video cameras and most platforms. Its extensive list of features includes:

- Support for iPhones®, iPads® and Android® devices
- Up to 16 simultaneous, resizable high definition video windows and allows up to 255 participants
- Video windows are dockable – ability to unpin, move and re-dock them
- Both VoIP and standard PSTN audio conferencing
- Private and group chat windows
- The ability for the moderator to control all aspects of the conference
- Video and audio (VoIP audio) mute capabilities – either simultaneously or alone
- Video windows that can be arranged on the desktop as needed
- Video and/or audio quality adjustment
- Security features to ensure communications are protected
- The ability to send e-mail conference invitations from the conferencing server or Microsoft® Office Outlook®
- Support for real-time application and desktop sharing plus whiteboarding
- Utilization of Microsoft PowerPoint® presentations during meetings
- Ability to record a conference session with a click of the mouse
- Polling questions and posting of results
- Remote desktop control

Use as a Standalone or Integrated Solution

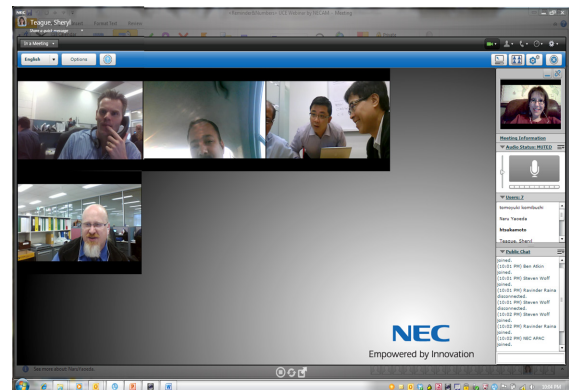

UCE Collaboration is part of the NEC's UC for Enterprise suite of solutions and can be integrated with the UCE Empowered User which includes the UCE Desktop Client.

Using the client or Microsoft Office Outlook toolbar version, users experience a complete, customized unified communications solution. Seamless integration with UCE Desktop Client enables users to take advantage of presence information to instantly determine if and when others are available to meet. Users can then quickly and easily launch multimedia presentations or video conferences from the client and join from their UCE Mobile iOS client, Desktop Client or even as external users from emailed URL links without loading specialized software.

UCE Collaboration can be purchased as a standalone audio/video conferencing solution with the same NEC features and functionality as NEC's Hosted Collaboration Service option. Both versions feature the same robust feature set; its level of integration is your organization's choice.

Every business is faced with the challenge of improving productivity while reducing costs. UCE Collaboration is an ideal way to empower employees and contribute to the bottom line.
