- Offers online Windows®-based PC Pro centralized HTML-based programming access for simple installation, setup and maintenance
- Allows sharing of one voicemail system between two or more communications systems with NetLink
- Offers impressive voicemail and automated attendant capabilities

Overview

Customers expect to conduct business quickly and easily. They have no tolerance for long call-holding periods, incorrect call routing or lost messages. NEC's UNIVERGE VM8000 InMail is the ideal solution for businesses wishing to maximize customer satisfaction by ensuring that all callers get to the people and information that they need without prohibitive hold times or dropped calls.

VM8000 InMail automates your communications by providing digitally-integrated voice messaging capabilities and Automated Attendant features. This embedded solution for the UNIVERGE SV8100 Communications Server can help meet your organization's communications needs both now and in the future.

Solution

Improves Customer Satisfaction

VM8000 InMail's robust Automated Attendant feature set ensures your customer calls are routed to the appropriate people and answered quickly and efficiently. When customers call in, an instruction menu announcement plays to provide them a choice of dialing options. They can simply direct themselves to the party that they are calling without being placed on hold or having their calls dropped.

Increases Employee Productivity

VM8000 InMail can increase your employee productivity by offering more control over incoming calls. These capabilities include:

- Easy one-touch access to voicemail features that help your workers efficiently manage calls and messages.
- Advanced call processing to eliminate the need for manually directing and routing calls. The automated attendant routes each incoming call based upon the time-of-day and day-of-the-week.

- Message playback options to allow individuals to set automatic playback upon login, mark previously saved messages as new and change the playback order - First In-First Out (FIFO) or Last In-First Out (LIFO)
- Different announcements and dialing options for each number in the office.
- Simplified message management from your email inbox – ability to save, delete or keep as new any voice message that has been forwarded to your email system.
- Integration with UC Desktop Suite enables you to access and visually see your voicemail inbox directly from your desktop client. It allows you to view/play/delete new and archived messages as well as change the status of a message resulting in time saved and increased efficiency.

Intuitive User Interface

The VM8000 InMail's interface is simple to learn and easy to use. Pre-recorded voice prompts offer a step-by-step guide on how to use all of the solution's features.

Simple Setup, Installation and Maintenance

VM8000 InMail is digitally integrated with the system's central processing unit to provide increased speed and accuracy to the voicemail system. Additionally, Windows®-based PC Pro enables online centralized HTML-based programming access. When employees use this intuitive browser-based software with its easy-to-follow wizards, time spent programming is reduced and fewer mistakes are made.

Share Voicemail Between Communications Systems with NetLink

VM8000 InMail works with NEC's UNIVERGE SV8100 NetLink to allow you to share one voicemail system between two or more communications systems. This centralization allows you to access your voicemail box from any location while reducing configuration costs for networking remote locations.

Impressive Voicemail and Automated Attendant Capabilities

VM8000 InMail includes the following essential voicemail and automated attendant features:
